Traditional storm water engineering with its vast array of pipe, inlets and ponds is yesterday's solution. Today, smart owners and design professionals are choosing the next generation of Low Impact Development solutions, reducing hard infrastructure, lowering costs and saving valuable land. They're choosing the FocalPoint system.

FLEXIBLE. RELIABLE. ECONOMICAL

- Gain usable square footage
- Improve system performance
- Reduce material requirements & cost
- Improve property aesthetics & value

FocalPoint takes current Low Impact Development technology to a new level by improving, verifying and guaranteeing biofiltration performance on every site. Reliable, high performance biofiltration enables reduced footprints, factors of safety, new application options and lower installation and maintenance costs. FocalPoint reduces the burdens of meeting storm water regulations today, and tomorrow.
