

Storm Water Products

engineering a better environment

StormSokTM

Stormwater filtration device

Simple – Effective – Economical
Catch Basin Insert Filter

What are Catch Basin inserts

Compact water filtering systems that are designed to be installed into existing roadside drains commonly called a catch basin

Located just below the grate, they capture and treat the water as it leaves the surrounding surfaces thereby reducing source pollution

StormSok Catch Basin Insert

The StormSok is an effective storm water filtering device designed primarily for sediment control

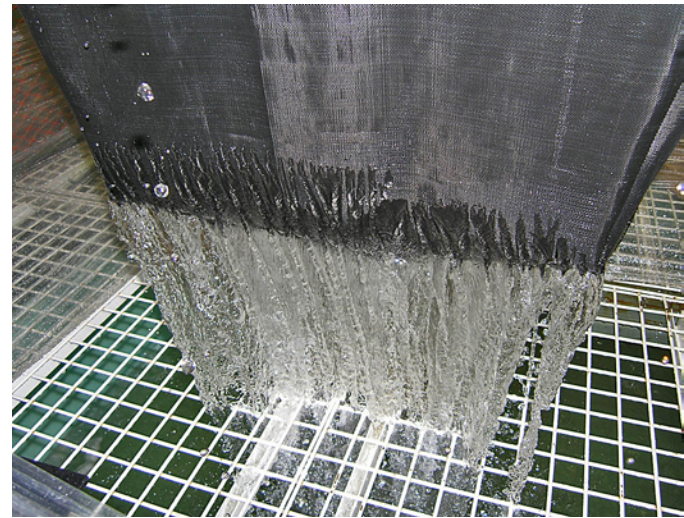

Features:

1. Heavy duty, factory-sized HDPE plastic mounting frame
2. A user replaceable, High flow, woven Geotextile filter bag
3. Covered emergency by-pass to retain captured material during extreme storm conditions
4. 4 lifting tabs for easy clean out

High Flow + Large Capacity

The Geotextile bags have the ability to retain large quantities of solids while maintaining high flow rates. This results in effective treatment during all weather conditions with minimal required maintenance.

Available Styles

The StormSok is designed to fit Round and Square Flat grate styles. Each StormPod is Factory sized and assembled prior to shipment

Factory sized and Assembled

The StormSok is available in round sizes from 24" to 30" and square sizes for 24" to 26"

Simple installation

Lift the grate – insert the pre-sized StormSok product – replace the grate

It's that simple

Easy Clean-Out

The 24”D x 30L StormSok can hold nearly 400 lbs of sediment and debris. 4 HD lifting tabs are provided to speed clean-outs and bag changes

1. Effective – holds nearly 400 lbs of trash, debris and sediments
2. Simple installation – Pre-sized mounting flange requires no modification or adjustments
3. Easy maintenance - 4 lifting tabs provided for easy clean out. User replaceable bag!
4. Cost effective – StormSok's are designed to be affordable allowing mass implementation without breaking the bank.
