STORMHOOD TRASH TRAP

TRASH, SEDIMENT AND OIL CAPTURE DEVICE WITH QUICK RELEASE

The StormHood is an outlet protection hood and stormwater filter that captures floatables and sediment in catch basins and sumped stormwater structures. Utilizing Fabco's popular expanding ring and quick release technology, the StormHood is easy to install and maintain.

The expanding ring is inserted into the outlet pipe opening and tightened by torquing a jackscrew, which expands the ring securely against the inside diameter of teh pipe. Then the back plate can be installed onto the expanding ring and the front cover be placed on and secured with the provided bolts. The expanding ring **requires no power tools or drilling of existing structures, making installation and maintenance easy.**
